## DETAILED ACTION

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 1-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Button et al. (USPN 5,786,584) in view of WO 98/17088.

Button discloses a vial and cartridge reading device for a blood glucose monitoring system (col. 3, lines 62-col. 5, line 8) that comprises an outer casing (32) that covers a blood glucose monitoring device. The glucose device slides into the cover provided by the rubber standoffs (col. 4, lines 45-50). The casing provides for a window for viewing the reaction (fig. 1, ref. 29). The glucose device comprises a slot (28) for receiving a disposable cartridge; the cover only covers part of the back and is small contact with the back (fig. 2); a gripping member (can be anyone of the sides).

Art Unit: 1743

Button does not teach a cover that is detachable with the main glucose monitor.

WO '088 teaches a replaceable decorative part made of plastic that is fitted to a case or frame of an electric appliance in order to give a decorative appeal to the device (abstract; page 4, lines 4-34). It would have been obvious to one having an ordinary skill in the art to modify the glucose monitor of Button to provide a decorative removable case of WO '088 in order to give the glucose monitor an appealing look so as to be more acceptable in the public, and also to reduce wear and tear on the glucose monitor (page 1, lines 21-37)
